

FOR IMMEDIATE RELEASE

## **SiteHive wins the Property, Construction & Transport category at the AFR Boss Most Innovative Companies Awards**

***FOR IMMEDIATE RELEASE***

***Sydney, Australia – October 29, 2025*** — SiteHive, a leader in innovative environmental monitoring technology, has won the Property, Construction & Transport category at the AFR BOSS Most Innovative Companies Awards.

The SiteHive Audio Classifier product was recognised for its game-changing ability to identify and classify construction noise in real time, saving significant amounts of time and helping to reduce the noise impacts of construction sites.

Co-founder Ben Cooper-Woolley says, "SiteHive has been focussed on delivering innovative, useful products from day 1, so we're thrilled to be recognised as one of Australia's Most Innovative Companies."

"In the building and construction industry we saw how we could make things easier and much more effective, and we worked directly with construction companies to achieve this. Everything has been designed and developed at the coal face, working with real project teams to solve real problems and challenges."

### **What is the SiteHive Audio Classifier?**

The SiteHive Audio Classifier uses integrated AI, hardware and software technology to replace what has traditionally been a manual listening process. SiteHive Hexanode monitoring devices capture real-time data, images and audio during construction. AI technology then analyses the sounds, and compares them to a comprehensive database of construction and other noises. It identifies and labels the noises - for example as a "digger", or "drilling", or "traffic".

The classified sounds are colour-coded and labelled in SiteHive Enviro Pro software. Through this, project teams can see immediately what's causing noise, and if it's related to the construction site. So they can take action to address and prevent noise issues as they happen, lowering noise impacts for teams, communities and the environment.

### **Why the award matters**

Winning in this category underscores SiteHive's leadership in a sector where environmental compliance, stakeholder engagement and operational transparency are increasingly critical. With the construction industry under pressure to reduce its noise, dust and other environmental impacts, SiteHive's solution turns data into action, helping projects stay ahead of regulation and respond to community concerns.

The recognition celebrates SiteHive's breakthroughs in real-time environmental monitoring and management for construction, infrastructure and industrial operations. Through its SiteHive Hexanode monitoring devices and SiteHive Enviro cloud-based software platform, SiteHive empowers project teams to manage and minimise noise, dust, vibration, weather and water impacts during construction and operation.

### **About SiteHive**

*SiteHive is an Australian technology company, specialising in real-time environmental monitoring and management for construction, mining, ports and other operational facilities. Through innovative hardware, intuitive software and data-driven insights, SiteHive helps project teams understand, manage and reduce their environmental impact during construction and operation.*

### **About the AFR BOSS Most Innovative Companies Awards**

*The AFR BOSS Most Innovative Companies Awards, published by the Australian*

*Financial Review and BOSS Magazine, recognise Australian and New Zealand companies that demonstrate excellence in innovation across a number of parameters, including new technologies, products and in embedding innovation into their organisations. The awards celebrate Australia's vibrant innovation ecosystem, highlighting the creativity, resilience and ambition of the business community. The Property, Construction & Transport category highlights trailblazers in built-environment and infrastructure sectors.*
