

# Melbourne Homeowners and Builders Now Have Access to 15 Years of Floor Screeding Expertise Under One Roof

---

*Complete Construction Service Expands Floor Screeding Offering Across Greater Melbourne, Delivering Precision Levelling Compliant with AS 3958.1-2007*

---

Melbourne, VIC — 17 February 2026 — Complete Construction Service, a Melbourne-based construction specialist registered as Construction and Rendering Services Pty Ltd (ABN 14 662 887 747), today announced the full rollout of its professional floor screeding services across all Greater Melbourne suburbs. With over 15 years of hands-on experience, the company now offers residential, commercial, and industrial clients precision floor screeding solutions that fully comply with Australian Standards AS 3958.1-2007 — giving builders, renovators, and property owners a reliable, technically superior option for their floor preparation needs.

## WHY FLOOR SCREEDING MATTERS FOR MELBOURNE PROPERTIES

---

The foundation of any durable floor installation starts beneath the surface. Whether a property is being fitted with large-format porcelain tiles, engineered timber, vinyl plank, or a waterproofing membrane, the quality of the screed bed determines how that finished floor will perform — not just on day one, but over decades of everyday use. Poorly applied screeding is one of the leading causes of tile cracking, hollow sounds underfoot, water pooling on balconies, and premature floor failure across Melbourne's residential and commercial property market.

Complete Construction Service has built its reputation over 15 years by solving exactly these problems. The company's floor screeding team is trained to assess each site individually, account for Melbourne's unique climate conditions and natural building movement, and engineer a screed solution that will stand the test of time.

*“Our screeding work is the invisible backbone of a great floor finish. When screeding is done properly, homeowners never have to think about it — the tiles stay flat, the drainage works perfectly, and the floor lasts a lifetime. That’s the standard we hold ourselves to on every single job across Melbourne.”*

— Director, Complete Construction Service

## A COMPREHENSIVE FLOOR SCREEDING SERVICE FOR EVERY MELBOURNE PROJECT

---

The company offers a full spectrum of floor screeding solutions, with each system engineered to the specific demands of the application. These include:

- Bathroom & Wet Area Screeding — Precise gradient creation for shower bases and bathroom floors, ensuring water flows directly to the waste and that waterproofing membranes perform at their peak. Water pooling and efflorescence are eliminated before they can begin.
- Balcony & Rooftop Screeding — High-strength, weather-resistant screeding systems designed to manage Melbourne's UV exposure, temperature fluctuations, and seasonal rainfall. Drainage gradients are laser-measured to protect structural slabs from moisture ingress.
- Commercial & Industrial Floor Screeding — Rapid-set solutions for retail spaces, warehouses, offices, and industrial facilities. Laser-guided screeding ensures Flatness (FF) and Levelness (FL) compliance required in commercial construction. Areas can be returned to heavy foot traffic within 24 hours.
- Bonded Screeds — Chemically adhered directly to the concrete slab for thin-bed applications, maximising adhesion strength where height constraints apply.
- Unbonded / Floating Screeds — Separated by a slip sheet for substrates where movement or moisture is a concern; recommended minimum 40mm thickness for structural stability and prevention of curling or debonding.

## **TECHNICAL EXCELLENCE: ENGINEERED MATERIALS & INDUSTRY-LEADING STANDARDS**

---

What distinguishes Complete Construction Service from generic screeding contractors across Melbourne is its unwavering commitment to technical precision and material quality. The company does not simply mix sand and cement — it engineers a specifically formulated solution for each unique site, substrate, and intended floor finish.

All screeding works are completed in strict compliance with AS 3958.1-2007 (Guide to the Installation of Ceramic Tiles), ensuring correct mixing ratios, appropriate curing schedules, and precise expansion joint placement. This eliminates the hollow-sound failures and debonding associated with low-quality screeding that plagues less rigorous operators in the Melbourne market.

The company works with industry-leading brands including Mapei and Laticrete to deliver high-performance products, including:

- Polymer-Modified Screeds — Enhanced flexibility and bond strength for substrates subject to structural movement.
- Rapid-Set Systems — For projects with tight construction timelines, allowing tiling within 24 to 48 hours of screed application.
- Fibre-Reinforced Mixtures — Reduced shrinkage and improved crack resistance across large, open floor areas.
- Hydronic & Electric Underfloor Heating Screeds — Specialist additives ensure the screed accommodates thermal expansion without cracking over the heating elements beneath.

*“We’ve seen too many floors fail in Melbourne because the screed beneath them wasn’t engineered for the site’s conditions. Our 15-year track record comes from treating every project as a technical challenge, not a commodity job. We use the right material for the right situation — every time.”*

— Lead Screeding Contractor, Complete Construction Service

## THE PROVEN 4-STEP PROCESS: TRANSPARENCY FROM QUOTE TO COMPLETION

---

Complete Construction Service operates with full transparency at every stage of the project lifecycle. Their proven four-step process ensures that Melbourne clients receive precisely what was quoted, on time, and to the highest standard:

- Step 1 — Site Assessment & Quote: A thorough on-site inspection is conducted to assess substrate conditions, drainage requirements, height constraints, and intended floor finish. A clear, itemised quote is provided with no hidden charges.
- Step 2 — Surface Preparation: The existing substrate is cleaned, any existing failed screed is removed, and patches or priming products are applied to ensure maximum adhesion and an accurate starting plane.
- Step 3 — Screeding Application: The precisely selected screeding system — whether cement, liquid, polymer-modified, or self-levelling — is applied using calibrated tools and laser-guided equipment to guarantee a perfectly level surface.
- Step 4 — Final Finish & Inspection: Every completed screed surface undergoes a rigorous quality inspection, confirming levelness tolerances, surface hardness, and drainage gradients before the site is handed back to the client.

## SERVING ALL MELBOURNE SUBURBS — FROM BRUNSWICK TO WERRIBEE

---

Complete Construction Service provides its full range of floor screeding services across the entire Greater Melbourne metropolitan area. Whether a project is located in the inner suburbs or on Melbourne’s expanding urban fringe, clients receive the same level of expertise, the same high-quality materials, and the same AS 3958.1-2007-compliant workmanship.

- Northern Suburbs: Brunswick, Essendon, Preston, Coburg
- Eastern Suburbs: Doncaster, Box Hill, Camberwell, Ringwood
- Southern Suburbs: Brighton, Bentleigh, Moorabbin, Cheltenham
- Western Suburbs: Footscray, Altona, Sunshine, Werribee
- And all surrounding Melbourne metropolitan areas

## ABOUT COMPLETE CONSTRUCTION SERVICE

---

Complete Construction Service is a Melbourne-based construction company specialising in rendering, tiling, waterproofing, screeding, and leak repairs. Registered as Construction and Rendering Services Pty Ltd (ABN 14 662 887 747) and trading as Complete Construction Service since 2010, the company has built an outstanding reputation across residential, commercial, and industrial sectors for delivering high-quality results at honest prices. The team works with homeowners, builders, developers, and insurers on projects ranging from minor remedial repairs to full-scale renovations and new builds.
