

Wild Tech announces contract signing of Chrysos Corporation

Wild Tech is pleased to announce the contract signing of mining technology company Chrysos Corporation. The new relationship is centred on the continuing evolution of Chrysos' financial platforms and systems. Specifically, the company will be launching NetSuite to support ERP implementation across the organisation which has staff throughout Australia, North America and Africa.

Chrysos was formed in 2016 as a business to commercialise PhotonAssay, a minerals analysis technology originally developed by Australia's national science agency CSIRO. Chrysos PhotonAssay™ delivers faster, safer, more accurate and environmentally-friendly analysis of gold, silver, copper and other elements. The technology has rapidly displaced slower, more hazardous and costly processes to become the mining industry's most innovative and valuable assaying solution.

Brett Coventry, Chief Financial Officer at Chrysos said "we selected Wild Tech for its focus on next generation digital operating models. Combined with its attention to our unique business and industry details, the fit made a lot of sense. We were particularly interested in Wild Tech's ability to support multiple platforms and deliver global scalability which helped in our decision to transition to NetSuite."

Wild Tech and Chrysos share a strong focus on delivering superior customer service. In this case, among many other value-generating outcomes, it includes ensuring cutting-edge assay technologies and services deliver the crucial operational data customers need to achieve better business results.

"Chrysos with its flagship technology, PhotonAssay, is really transforming the worldwide mining industry, and we couldn't be happier to support the business as it continues to evolve the systems and platforms underpinning its global growth strategy," said Grant Wild, Managing Director of Wild Tech.

"The key to this exciting mission-aligned partnership, will be to help Chrysos future-proof its digital operating model and support its ongoing market penetration plans," Grant concluded.

About Chrysos

Chrysos Corporation combines science and software to create technology solutions for the global mining industry. With staff across Australia, North America and Africa, Chrysos' team of scientists, engineers and industry specialists blends innovation, technical expertise and superior customer service to create cutting-edge assay technologies and services that deliver the crucial operational data customers need to achieve better business outcomes. Originally developed at Australia's national science agency, CSIRO, the company's flagship product PhotonAssay delivers faster, safer, more

accurate and environmentally-friendly analysis of gold, silver, copper and other elements. The technology has rapidly displaced slower, more hazardous and costly processes to become the mining industry's most innovative and valuable assaying solution.

About Wild Tech

Wild Tech are end-to-end ERP transformation partners, that leverage a unique industry led approach, combined with market leading platforms, to build Australia's next generation of digital operating models. The company is Australian owned and operated with a demonstrated national capability.

For Wild Tech, the evolution of transformation starts with a deep understanding of industry requirements. That means listening in order to be a step ahead, ensuring that business processes, organisational maturity and budgets, are considered in light of the nuances of each platform and their ability to really deliver on the future-proofed platform required in 5,10, and 15 years time.
